

Pension Funded Status Tracker

July 2021

ASSET MANAGEMENT | REPORT

Over July 2021, the average corporate defined benefit pension plan's funded status remained flat at 95% funded.

- » While growth assets saw a degree of mixed performance, bonds rallied across all major indices, resulting in an increase in the asset portfolio value:
 - Across equities, emerging markets witnessed the largest declines whereas US large cap equities had the best performance.
 - Within fixed income, long US Treasuries outperformed all other fixed income sectors.
- » Liabilities also increased in value as a result of the fall in interest rates:
 - The decrease in interest rates was partially offset by the widening of high quality corporate bond spreads.
 - As a result, the effective liability discount rate dropped by roughly 14 basis points over July.

Data and Methodology

Conning's Funded Status Tracker is a monthly publication that tracks the performance of the average defined benefit pension plan (the "Plan") of select corporate sponsors comprising a subset of the Russell 3000 Index. The data in this monthly review was reported in the 10-Ks of 563 publicly traded companies from the Russell 3000 index for the 2020 year-end.† Further, the Funded Status Tracker was updated retroactively to reflect published 10-K data for the 2020 year-end. All months of 2021 have been restated to account for the, now known, 2020 year-end position. In addition, the annual tracking of the 10-K data for the years 2016-2020 have been restated to reflect the change of the underlying universe of 583 plans to the current universe of 563 plans. Going forward, the monitoring of 2021 months will continue until 2021 year-end 10-Ks become available, at which point, the same methodology will be applied to include 2021 year-end position with the subsequent 2022 months retroactively updated. Note: these assets may include non-U.S. pension plans. In aggregate, these 563 entities reported \$1.57 trillion in plan assets and \$1.81 trillion in plan liabilities at year end 2020.

The average plan size of the subset of the Russell 3000 index universe outlined above is approximately \$2.80 billion in assets and \$3.21 billion in liabilities, as of December 31, 2020. The Plan's liability is a hypothetical cash flow generated from our proprietary model to reflect a 13.5-year duration and valuation equivalent to the Plan's PBO on a US GAAP valuation basis as at the end of 2021, but allowed to drift with market conditions during the months following in the year.

It is important to note that asset definitions are not uniform. Conning's analysis of companies' financial statements has found that some firms only report individual stocks as equities, while other firms include stock mutual funds. A similar mixing of types occurs in fixed income. In this analysis, Conning has used the allocations as reported by the companies and not adjusted them. Funded status is the percentage of liabilities that are covered by assets. Interest rate hedge ratio is the dollar duration of assets as a percentage of liability dollar duration.

† For the periods 2016-2020, data from 563 publicly traded companies were used. These companies were selected because they had consistently filed pension data every year for the period from 2016 through to 2020.

LDI Hypothetical Model Disclosures

The proprietary model analysis presented herein is for illustrative purposes only. The model relies on a number of assumptions that are generally stated in the Data and Methodology and within the illustrations. The assumptions can be subject to significant uncertainties and contingencies, and such illustrations may change materially in response to small changes in one or more of such assumptions. The data used for this model was obtained from sources deemed reliable, and then organized by Conning, Inc. and was not audited by any third party. Errors could have occurred in the data, in the calculations, or in the preparation of this analysis. Therefore, information contained in this analysis may not be precise. C: 13377475
